

## Claims

1. A handle bar connectable to a wheeled invalid walker for pulling or pushing a seated invalid, said handle bar comprising:
  - a bar;
  - a handle situated at one end of the bar; and
  - a hinged mount situated at the other end of the bar and connectable to the walker, said handle bar folding toward the walker on the hinged mount into an upright non-operating position.
2. A handle bar as in claim 1 wherein the hinged mount is made of two semi-circular plates surrounding a horizontal tube of the walker structure, said two semi-circular plates being hold together by holding clamps, and one of the semi-circular plates being connected with the hinge fixed to the other end of the bar.
3. A handle bar as in claim 1 or 2 wherein the handle bar is adjustable in length.
4. A handle bar as in claim 1 or 2 wherein the handle bar is adjustable in length with a spring actuated button adjuster.
5. A handle bar as in claim 1, 2, 3 or 4 wherein the handle bar is held in the upright position with a holding strap.
6. A handle bar as in one of claims 1-5 wherein the other end of the bar is capped with a protective cap.
7. A handle structure connectable to a wheeled invalid walker for pulling or pushing a seated invalid, said handle comprising:
  - a U-shape bar having two side sections and a horizontal middle section joining the two side sections, each side section having an end;
  - a handle formed by the middle section; and
  - a hinged mount situated at each end of the U-shape bar and connectable to a generally vertically oriented tube of the walker structure, said handle folding toward the walker on the hinged mount into an upright non-operating position.
8. A handle as in claim 7 wherein the U-shape bar is made of two sections allowing distance adjustment between the two side sections
9. A handle as in claim 8 wherein the middle section is covered with a foam grip.
10. A handle bar as in one of claims 7-9 wherein each end of the bar is capped with a protective cap.
